

Anatomic Sits brochure

Individual seats are the foundation of Anatomic Sitt since the beginning of 1988. With over 30 000 made seats we can today say that we are one of the leading producer of individual seats in the world. Our vision since the beginning has been that through knowledge and innovation be able to prevent pain and incorrect positions. We make activities possible and life as good as possible for our patients.

To make the impossible possible - is to give those with great difficulties the opportunity for an increased quality of life.

Old craft is supplemented with new technology

With time and experience, new ideas will come and with new ways of thinking new development opportunities will come. The idea is, and has always been, to create seating aids that make it easier for those with difficult sitting problems. The difference, between now and then, is that the manufacturing possibilities have improved.

Many years of experience resulted in Soft Sits. We wanted to see the user's need for stable positioning and dynamic sitting, which is obtained in a Anatomic Sits. We want to combine that experience and knowledge with the opportunities offered by new manufacturing technology, new materials and innovations that can be used on patient occasions.

The key word through the development has been a mix between positioning and pressure relief in foam, as well as simple re-ordering and the possibility of flex dynamics also included in this manufacturing process.

Dynamical seats

Our individual seats are dynamical. The seat shell is made of polyethylene plastic that allows for movement in the seat. If you want more movement in the seat, you can order it with an flexible part between the seat and back.

Anatomic Sits are often used with a flexible hip joint, which allows an adjustable hip / back angle.

Re-order made easy

Thanks to a new advanced technology it is possible to re-order a Anatomic Soft Sits without a new moulding and scanning required. This simplifies for both patient, family and healthcare staff. In addition, the process is shortened to a finished individual Anatomic seat.

Incontinence protection

All different covers to a Soft seat can be ordered incontinence-protected.

For an Anatomic seat, you can order a loose incontinence cover if needed.

Coolmax® covers

Anatomic Soft Sits Coolmax® covers are a high-tech cover designed to keep you dry and cool and increase your comfort. Coolmax® fabrics are made of specially treated polyester fibers with a unique surface construction. This four or six channel fiber removes moisture from the skin that occurs when we sit for a long time and gives a cool comfortable seat for longer usage. Anatomic Soft Sits Coolmax® cover together with Anatomic Soft Sits "vent" give you the best comfort! Anatomic Soft Seat can of course be ordered with other covers in several different combinations and colors.

Ventilation holes

With holes through both plastic shell and seat material, Anatomic Soft Sits becomes ventilated and the air can circulate with gives a colder seat.

Crashtested and approved

Anatomic Sits is crashtested and approved according to ISO 16840-4:2009 performed by Sveriges Tekniska Forskningsinstitut, (Sweden's technical research institute).

Because all people look different

Anatomic Sits is available with different material choices to provide good function and meet different needs for pressure relief. Covers are available in many different variants and colors. All accessories available for our Anatomic Sits are of course also available for Anatomic Soft Sits and kombi sits.

The importance of making the right choice

We have the opportunity to offer a flexible material and model choice according to the needs of each individual patient. Our goal is to find the support needed to prevent the occurrence of "erectile dysfunction", maintain symmetry or correct erectile dysfunction, relieve and prevent pressure sores and break severe spasticity in case of severe sitting problems.

All our materials have good durability, shape stability and provide good pressure relief.

In our opinion, the combination of different materials is the secret behind a really good individual seat! More than 30 years of experience has given us knowledge on how to combine hard and soft materials for a good seat position. Today we use a variety of materials in manufacturing. All materials have good pressure relief capabilities but behave differently in heat and cold. They also have different airflows.

Regarding individual seats, we have chosen to use PEHD because the plastic is the best for the patient and the most durable. It never cracks which can happen with ABS plastic. PEHD also has a very good "toughness" in itself, which means that it simply does not break down, for example when drilling holes, brackets and divisions in the plastic eg. between the back and the seat.

PEHD also has great dynamics in itself, which is good for patients with spasticity.

In some other aids, we have chosen to work with ABS plastic, where we have supplemented the product with another dynamic function.

Examples of materials to choose from:

- Cold foam
- Soft foam
- RR/Mesh
- PZ
- AZ
- Gel

Anatomic Sits provides the best support in an individual seat and it is possible to choose between many different accessories.

The importance of good support are crucial to prevent that deformities occurs or worsens. Good support improves the function of the organs, relieves pain and gives freedom of movement.

* In combination with our underframes

Anatomic **Sits**

- High pressure relief
- Individual made depending on the users need
- Great postural support
- Oppertunity to get a adjustable hip angle
- Re-ordering is possible without the need for a new scan
- Superior fixed supports

Options:

- Add ventilation holes, makes the seat colder and gives a good ventilation throughout the seat
- Choose washable/Removable RR-lining
- Choose between different foams/materials depending of the patients need for pressure relief and positioning
- Possible to add an Airset, to get an seat extra cold

A seat for those who need a good support but is pressure sensitive

Anatomic Soft Sits come with different foam choices depending of the individual need for pressure relief.

* In combination with our underframes

Anatomic **Soft** Sits

- Superior pressure relief
- Individual made for the users need
- High postural support
- Oppertunity for adjustable hip angle
- Re-ordering is possible without the need for a new moulding and scanning
- Good fixed supports

Options:

- Add ventilation holes - makes the seat colder and gives a good ventilation
- Choose washable/Removable RR-lining
- Choose between different foams / materials depending of the patients need for pressure relief and positioning
- Possible to add an Airset, to get an seat extra cold

Combine the best of two worlds, a Soft sits combined with a classic Anatomic sits

In an Anatomic Kombi Sits we combine the best from two worlds, Anatomic Sits and Anatomic Soft sits. This seat is for patients with the need of support and relief.

In the picture you see a seat made for an active wheelchair where we have a soft sits for extra pressure relief and a hard back (anatomic sits) for a firmer positioning of the patients lower back.

Anatomic **Kombi sits**

- Superior postural support
- A seat for patients with a great need of support
- Works perfect to active wheelchairs
- Combine the seat with a special flex joint if needed, which have both flexibility and back angle adjustment
- Fixed support
- Heat cushions to get a warm seat during wintertime
- Possible to have more than one lining which makes it easy to fit with thicker clothes during the wintertime

Hip belts

Evolution seat
cushion

A seat cushion with the possibility of individual adjustment

The cushion is made of a pressure-relieving foam, which makes it easy to modify and adapt it to the patient's needs and conditions.

We can also offer customized covers according to the shape of the cushion. All our covers are detachable and washable and come in several colors. We can also integrate Gel / RR material for increased pressure relief.

Our "soft material" is a proven material, which we also use with great success for all our individually manufactured Anatomic Soft Sits.

Anatomic Seat cushion

- Available in 5 standard sizes or option for individually ordered dimensions
- Very good pressure relief
- Available with standard fabric or Coolmax fabric (which makes the seat cushion cooler)

Step 2 One of our trained professionals make a mould and scanning

Step 3 The final Anatomic seat is fitted by an Anatomic SITT trained professional upon delivery

Seat

With an opening for hygienic purposes that are made individual

Anatomic Hygiene seat

A individual molded Anatomic Hygiene Sits with its functional positioning can be the sole solution to persons with complex seating issues. Especially suitable to persons with specific support and/or pressure relief needs. The same scan can be

used to make an Anatomic Sits. Accessories such as the headrest, footrest, armrests, belts, and harnesses can all be custom-made for each individual user. For optimal results, you can mount the hygiene seat on the Starfish underframe.

Anatomic Hygienic seat

Our hygienic seat has all the benefits of a classic Anatomic sits. An individual designed Anatomic Hygiene sits with functional sitting position helps patients with severe seating problems to handle their hygiene during shower and toilet visits. This seat is superior when the patient has special needs for individual support and pressure relief.

Lining

Anatomic Hygiene Sits has a pressure relief lining. This fabric is specially designed for hygienic situations and is both liquid and dirt repellent while feeling comfortable against the body. An individual designed Anatomic Hygiene sits with functional sitting position helps patients with severe seating problems to handle their hygiene during shower and toilet visits.

Adjustable tilt and hip angle

Fixed supports are needed to position the user and create a functional sitting position. Dynamic function is needed to give freedom of movement, variety as well as one soothing effect on extensional spasticity. The seat shell is made of polythene plastic that allows for movement.

Suitable under frames

Starfish Pro undercarriage.

Available in 3 different sizes and different models. For more info about Starfish Pro, see our website www.anatomicssitt.com

Starfish Pro Manual

Fixed chassis but with manual adjustment (without tools) for a seat height between 53-63 cm.

Starfish Pro Hydraulic

Height adjustable chassis with hydraulic adjustment between 53-78 cm in seat height.

Starfish Pro Electrical

Height adjustable chassis with electric adjustment between 53-78 cm in seat height.
